

Amendments to the Specification:

Please replace the title of the present application with the following amended title:

A PROCESS FOR STARTING A DATA PROCESSING INSTALLATION, AND AN
ASSOCIATED COMPONENTS DATA PROCESSING INSTALLATION

Please replace the paragraph which begins on line 13 of page 4 with the following amended paragraph:

In a further embodiment, the reload memory unit is a nonvolatile memory unit. Reload memory units which output the stored program commands serially can be used. In one development, the storage capacity of the reload memory unit is in the megabyte range. The reload memory unit can, therefore, store operating systems having several hundred megabytes. In one refinement, the reload memory unit used is a "multimedia card". To access such cards, a protocol needs to be observed which the processor does not control and which uses specific control commands. The control commands include data words whose bits stipulate the command to be executed. The commands have been standardized by the MMC agreement (Multi Media Card). ~~More detailed information relating to such cards can be obtained at www.scandisc.com.~~
